- Describe the archive process flow
- Create a source repository
- Create a target repository
- Create a security group
- Create and define an archive project
- Schedule and run an archive project
- Monitor the status of the archive job
- Open and read the Row Count report

ILM Data Archive Web UI Online Restore

- Describe the restore process
- Describe the restored flow
- Describe the various methods to restore an archive
- Describe a cycle restore project
- Describe a transaction restore project

Seamless Access

Describe and create a seamless access job

ILM Data Archive-Application Retirement

Introduction to ILM Data Archive

- Describe Informatica's approach to Application Retirement
- Describe Informatica ILM DATA ARCHIVE
- Explain ILM Data Archive Architecture

System Administration

- Describe System Configuration
- Explain Source and Target Connections
- Explain JDBC Connectivity

- Describe Auditing

Users and Security

- Creating and Managing Users
- Understand the concept of System-Defined Roles
- Describe the significance of Administrator Role and its privileges
- Describe Security groups
- Explain Database privileges
- Describe File Archive user roles

Module 13: Informatica Enterprise Data Manager

- Describe ILM Enterprise Data Management (EDM)
- Describe its Architecture
- Describe the key features, benefits, and uses

ILM File Archive Service (FAS)

- Describe features and architecture

ILM Application Retirement Project

- Describe the application retirement process
- Create a source repository
- Create a target repository
- Create a security group
- Create a retirement project
- Schedule and run the retirement job
- Open and read the Row Count report

Handling External Attachments

- Describe how to manage attachments

Data Discovery Retention Management and Legal Hold

- Describe Discovery Portal
- Describe retention management and types of retention
- Describe the significance of legal hold
